Neuropsychology-Related Ethics References

February, 2014

Shane S. Bush, Ph.D.

The following reading list is provided to inform those interested in the nature of ethical issues and challenges encountered in the practice of clinical neuropsychology. The list, while lengthy, is by no means all inclusive. By providing this list, AACN is not endorsing any particular position on various ethical dilemmas arising in practice, but rather is only encouraging its membership and other interested readers to be well informed about ethical challenges and decision making.

Ethical Decision Making in Clinical Neuropsychology. Neuropsychology is a branch of psychology that is concerned with how the brain and the rest of the nervous system influence a person's cognition and behaviors. More importantly, professionals in this branch of psychology often focus on how injuries or illnesses of the brain affect cognitive functions and behaviors. It is both an experimental and clinical field of psychology that aims to understand how behavior and cognition are influenced by brain functioning and is concerned with the diagnosis and
